

1. An improved jewelry finding for pierced earlobes comprising: a deformable wire shaft and having first and second free ends having a principal axis, a longitudinally adjustable enlargement surrounding said shaft of sufficient size to prevent the passage of the enlargement through an opening in the earlobe of a wearer; said shaft having a fixed smaller enlargement at each of said first and second free ends, said enlargements being sufficiently small to pass through said opening in said earlobe of said wearer.

2. An improved jewelry finding for pierced earlobes comprising: a deformable wire shaft and having first and second free ends having a principal axis, a medially fixed enlargement surrounding said shaft of sufficient size to prevent the passage of the enlargement through an opening in the earlobe of a wearer; said shaft having a fixed smaller enlargement at each of said first and second free ends, said enlargements being sufficiently small to pass through said opening in said earlobe of said wearer.
